

NERA Research Officer/Economic Analyst (m/f/d): Competition Economics, Berlin German Speaker

At NERA you will apply the economic principles you learned at university to provide clear and credible expert analysis that has an impact on important decisions by clients, judges, juries and regulators.

NERA's economists have been creating strategies, studies, reports, expert testimony and policy recommendations for regulatory authorities, governments and the world's leading law firms and corporations for over half a century. NERA Economic Consulting serves clients from over 25 offices across Europe, North America and Asia Pacific.

In the Competition Economics team, you will work on high-profile cases conducting theoretical and empirical economic analysis. You will for example develop economic evidence as to whether a tech firm may have abused its market power, quantify the damage possibly caused by a cartel, or accompany the parties to a merger through the review process in front of the European Commission or other competition authorities.

Your typical tasks will include:

- Conducting literature and data research
- Applying your technical skills and knowledge of economic theory and econometrics from the academic and policy literature to the facts of a case
- Cleaning, managing and analysing data as well as interpreting the results and translating them for a non-technical audience
- Assisting in drafting reports, memoranda and presentations
- Contributing to the team's intellectual capital

Additional tasks as Economic Analyst will include supporting the more senior staff in:
Managing people, projects and client relationships

This job is for you if you:

Hold an excellent master's degree in economics/econometrics, statistics or a closely related field (Research Officer)

Hold an excellent master's degree and have at least two years of experience in an economic consultancy or a competition authority; or hold a PhD (Economic Analyst)

Have excellent English and Italian oral and written communication skills, with German being an advantage

Can work under tight deadlines and enjoy solving problems

Are familiar with data analysis using Stata and possibly have advanced programming skills in R, Python or MatLab

Have relevant work experience and/or are specialised in applied microeconomics, industrial organisation, competition economics or econometrics at university

What we offer:

Attractive remuneration and benefits

Learning from leading economists and industry experts

Having a real impact by applying economic theory and methods in high-profile cases

Early responsibility in project work providing you with outstanding development prospects

A collaborative environment with flat hierarchies
