

LOOKING FOR SOFTWARE DEVELOPERS

You know what `[](){}();` does?

WHO WE ARE

We are a small team of three founders that creates and licenses designs for digital computer chips. We are developing our own tool called "Gatery" that enables us to design these chip components in a very time efficient and reusable manner. Our customers are companies that themselves are developing digital computer chips for hardware acceleration of various tasks and that want to buy-in stock components or outsource parts of their design work. We already developed and sold our first products and filed for our first patent last year. Now, we are ramping up production and sales and expanding our development activities. Our next product is a key-value-store for DoS-resistant hardware firewalls for data centers, implementing our patent. There is a lot of work to be done and our structure is still in development. This may mean that things can sometimes be a bit chaotic, but you will be able to be part of building a company, a tech stack and, if things go our way, a new way to create hardware to become the next industry standard. We cherish open, constructive communication to get better every day.

We are very happy about applicants who bring any and all kinds of diversity. Please just send us your CV and your portfolio, as well as anything about you that you find interesting. We'll take it from there and get in touch with you.

WE ARE LOOKING FOR:

- strong software development skills
- experience in c++
- experience in low level / close to metal programming
- knowledge or at least affinity in networking (IP stack) and PCIe
- FTE with Master's degree and > 3 years experience, as well as student/intern

YOUR RESPONSIBILITIES:

- contribute to the development of our RTL-design library "Gatery"
- write firmware / driver code
- write software and driver to run system tests
